PACKAGED WWTP

WSI International's packaged wastewater treatment plants are a top choice for efficient and effective wastewater treatment across a range of applications. These plants are renowned for their compact size, superior performance, and customized solutions, which ensure compliance with stringent regulatory standards for effluent quality. In addition to their impressive treatment capabilities, these plants boast a low maintenance design that provides a cost-effective solution for large volumes of wastewater treatment. Their versatility and flexibility allow for tailored treatment options, making them an ideal choice for specific treatment needs. Furthermore, the automated systems of WSI packaged WWTPs require minimal operator intervention, making them the perfect solution for remote locations or areas with limited access to skilled labor. Overall, WSI packaged WWTPs offer a lower total cost of ownership over the plant's life, making them the most cost-effective solution for various wastewater treatment needs.

WHY WSI STANDS OUT

STAINLESS STEEL

Stainless steel is an ideal material for wastewater equipment due to its resistance to corrosion, durability, and ability to withstand harsh environmental conditions.

REMOTE CONTROL

Remote controls for a WWTP system allow for increased efficiency, flexibility, and ease of use in the operation and maintenance of the system.

SUPPORT

WSI provides excellent support for its products, including expert technical assistance, spare parts availability, and maintenance services, ensuring maximum uptime and optimal performance of the equipment.
